

## Wireless Vibration Detector

# WD-80

## User Manual

### Descriptions

The Wireless Vibration Detector adopts the theory of vibration, touch and motion mode. Once it detects any vibration, it will automatically send wireless signal to the control panel for alarm. It is widely used for window, door, drawer, safe and so on. Its vibrating sensitivity can be adjusted in three levels thus it can prevent false alarm effectively. Two pieces of AAA 1.5V LR03 batteries are included in the detector, which enables 12 months standby.

### Appearance

### LED Indication

Flash once: Intrusion detected, sending wireless signal to the control panel.

Flash once every 2 seconds: Low battery, please replace the battery immediately.

### PCB Layout

### Sensitivity Setting

Take off the back case with screwdriver, and put the black jumper cap onto the jumper of required sensitivity level.

### Connecting to the Control Panel

Make sure the control panel is under learning status, press the tamper switch or simulate an alarm case. When signal is received and one beep is heard, they are connected successfully.

### Installation

1. Remove the insulated strip; the detector will enter working mode.
2. Clean the surface of object to be installed.
3. Fix the detector on the surface of the object with double-sided adhesive tape and make sure the antenna is upward.
